#### INTRODUCTION

# Oil About the CSR Report

To practice corporate social responsibility (CSR) and make full communication with stakeholders, Taisun Int'l (Holding) Corp. (hereinafter referred to "We/Our/Us" or "Taisun") began to disclose our CSR performance in the previous year by publishing a CSR report on an annual basis as of 2020. This CSR report has been prepared in accordance with the Core option of the GRI Standards published by the Global Reporting Initiative (GRI) and the "Rules Governing the Preparation and Filing of Corporate Social Responsibility Reports by TWSE Listed Companies" published by Taiwan Stock Exchange Corporation. This report also addresses topics that concern all stakeholders and presents our efforts in the economic, social, and environmental aspects by linking Taisun's business and the reporting principles.

The reporting period of this report is January 1 to December 31 of 2019. Information is extracted mainly from the management and performance in sustainable development of our major locations of operations, with boundaries covering business locations in Vietnam, Cambodia, and Taiwan. All data and figures in this report are collected by employees of different departments and submitted to the CSR Team for consolidation before evaluation and approval by the head of different departments and the chairman to ensure the quality and accuracy of data and figures. All financial data contained in this report is extracted from the consolidated financial statement and AGM report certified by the public accountant. Special conditions will be explained in the report.

The current issue is published on September 22, 2020, and the next issue will be published in September 2021.

#### **Contact Information**

Should you have any recommendations or doubts regarding this 2019 CSR report, please feel free to contact us according to the following contact information for us to make continual improvements.

### 0.2 Letters from the Chairman

Since the company was established, we have been specialized in the manufacture of high-quality baby diapers, adult diapers, women's sanitary napkins, and wipes. After years of efforts, we have become a leading brand of adult hygiene care products in Asia. Looking back at 2019, employees experienced many beautiful things and overcame many challenges and difficulties through concerted efforts. I whole-

heartedly thank all Taisun employees for their efforts and contributions. Thanks to your ceaseless efforts and continuous devotions, our business performance improved and sales reached a new height.

"Growing Together" is Taisun's corporate spirit. Besides insisting on continuously developing quality products to make life more convenient and better for consumers, we also value the co-existence and co-prosperity with local communities, the environment, and local residents, and we have practiced this spirit for nearly 20 years in our major locations of operation. As this spirit coincides with our CSR, we have concluded the foci of our CSR practice and corporate spirit in the following six categories: "ethical governance," "product responsibility," "Innovation and R&D," "happy workplace," "social Engagement," and "green environment."

Although 2020 is a year of vigorous upheavals in the macro environment, it is also the critical year for CSR implementation at Taisun. First is the restructuring of the board of directors, in which the number of independent directors has increased to four, over one half of the total of seven directors on the board, hoping to improve the Company's ethical management and transparent administration through the in-depth engagement in the board's actual operations of social elites. In addition, the CSR Committee has been established and a chief governance officer (CGO) assigned with the board's approval to constantly plan and implement CSR-related activities. Lastly, we officially published the Company's first CSR report in September 2020 to disclose to the public our achievements in and future planning for CSR.

Looking to the future, we will develop eco-friendly, bio-degradable diapers that are lighter, softer, more air-permeable, and with more value added. Apart from complying with the increasingly stricter environmental protection requirements across the world in recent years, these revolutionary products can help Taisun enter brand-new markets in high-income countries with stricter environmental protection requirements. In addition, upholding our focus on the core business and flexibility in strategy uses, we will continue to enhance resources integration to create new value, in order to "build an outstanding enterprise," "cultivate excellent talents," and contribute to society.

We specialize in developing new products and new technologies that can improve the global environment and enhance the living quality and safety of humans. Business ethics, legal compliance, occupational safety, and environmental protection have always been the focus of our work. We are also committed to practicing our CSR, particularly when CSR is a commitment that should be fulfilled by enterprises highly esteemed by general investors. In the future, we will enforce sustainable development to achieve win-win for "customers," "employees," "shareholders," "partners," and "society."

Although we have engaged in CSR-related areas for nearly 20 years, as this is our first CSR report; we are looking forward to the comments and advice from competent authorities, shareholders, and investors on any room for improvement. Thank you!

## 0.3 Letters from the CSR Committee Chairman

Ms. Hou Gue Feng
CSR Committee Chairman

Enterprises manipulate global economic activities worth trillions of US Dollars and covering all aspects of life, including food, clothing, housing, transportation, and entertainment. Enterprises are also the world's largest group, with more resources critical to determining social progress and changes than any individual. As a corporate citizen, we founded the CSR Committee in 2020 to establish the Company's future CSR strategies and approaches in collaboration with internal and external directors and officers, in order to internalize CSR as part of Taisun's corporate culture, transform it into the DNA of all employees, and turn it into the reference for all business decisions, with an aim to spend what is taken from society in society's best interests.

Based on the preliminary blueprint established by the CSR

Committee for Taisun's sustainable development, environmental protection, social participation, and corporate government will be the three main aspects of our CSR practice in the next three years. Based on these three aspects, we have developed the following six performance indicators: "ethical governance," "product responsibility," "innovation and R&D," "happy workplace," "social engagement," and "green environment" to pursue reciprocity, co-prosperity, and sustainable development for the Earth, society, customers, employees

and shareholders.

Practically, we have defined and progressively achieved indicators addressing aspects covering climate change, governance information disclosure, supplier sustainable management, product quality, customer service, and social participation.

In the pursuit of green environment, we will actively rebuild a green supply chain and promote the localized supply of materials supply in two major production bases, Vietnam and Cambodia, to reduce carbon emissions and shorten the supply chain, in order to conserve energy and reduce carbon in collaboration with suppliers to pursue the sustainable development of the supply chain.

In building a happy workplace, we protect the rights and interests of local workers, provide a work environment that is safe and can promote employee health, enforce talent training and personalized employee career development and planning, and offer multiple benefits to make Taisun a healthy corporate citizen emphasizing corporate health responsibility (CHR).

In co-prosperity and sustainable development with local communicates, we actively expand our influence on local communities in Vietnam, Cambodia, and Taiwan, covering care for the vulnerable, industry—academia collaboration, and community environment and industrial development, to drive the virtuous circle and local prosperity in local communities.

Adhering to fear of Heaven and fraternity for all, with Taisun as the center of the eccentric circle and the Company's expertise and resources, we engage in the co-prosperity and sustainable development of the employees, shareholders, local communities, society, and the Earth in the outer rings within the eccentric circle, in order to act as the motor that drives continual improvement.

# 0.4 Sustainable Strategies

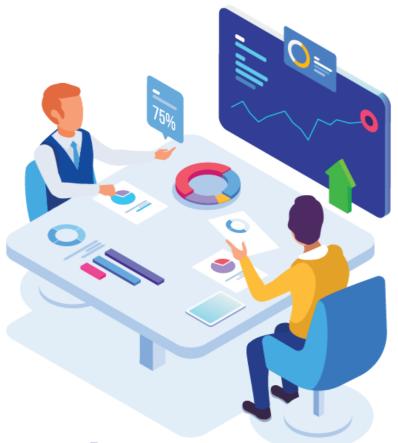

To practice CSR and promote economic, environmental, and social progress of sustainable development, based on the "Corporate Social Responsibility Best Practice Principles for TWSE/GTSM Listed Companies" published by Taiwan Securities Exchange, we convened a board meeting on December 31, 2014 to establish the Company's "Corporate Social Responsibility Best Practice Principles" for the reference to promote CSR-related activities within Taisun. The contents of our CSR Best Practice Principles cover the implementation of corporate governance, promotion of sustainable development for the environment, maintenance of social welfare, and enhancement of CSR information disclosure.

To ensure the implementation of the CSR policy, we have formed the CSR Promotion Team with respect to Article 7 of the Company's CSR Best Practice Principles to propose CSR policies or systems and promote the implementation of CSR in all aspects.

Upholding the corporate spirit of "Growing Together," we have drawn up the strategy for sustainable development and designed the following six aspects for sustainable development: "ethical governance," "product responsibility," "R&D and innovation," "happy workplace," "social engagement," and "green environment" to develop the strategy for sustainable development and pursue the Company's sustainable development, and to enforce management of environmental, social, and governance (ESG) per-

formance based on this blueprint in the next three years to expand the Company's influence.

In 2015 the United Nations (UN) passed the 17 Sustainable Development Goals (SDGs) in the agenda for sustainable development. We will link our strategy for sustainable development to these SDGs and set corresponding management approaches to correspond to our commitment for practicing sustainable development and SDGs over time.

| SDGs                               | Target  | Taisun's Practice/Effectiveness   | Corresponding<br>Chapter                          |

| consumption and production         |   | Use of green materials:<br>- 30% by 2030<br>- 60% by 2040<br>- 100% by 2050   |   |
|                                    | 12.6 Disclose sustain-<br>ability information                                     | Publish the CSR every year as of 2020.  | About the<br>CSR Report                           |
| 13. Climate action                 | 13.3 Improve education and capacity on climate change mitiga-                     | Install green energy generation<br>system, e.g. PV system:<br>- Use green energy up to 50% by<br>2025<br>- Use green energy up to 70% by<br>2040<br>- Use green energy up to 100%<br>by 2050    | Green<br>Environment                              |
|                                    | tion, adaptation,<br>impact reduction   | Green building Plan:<br>Green building rate at<br>30% by 2030, 40% by<br>2040, and 50% in 2050.   | Green<br>Environment                              |

We value corporate governance and business performance. Therefore, we formed a CSR Operation Team across departments under the Chairman's Office, with the chairman also president as the top commander, senior officers as the committee chair, and representatives of all units (purchasing, sales, manufacturing, R&D, financial, and administration departments), the Cambodia subsidiary, and Taiwan branch as committee members. The team holds meeting regularly to plan and implement the CSR annual plan. In addition to the regular meetings, the team also hold the CSR target discussion meeting at the end of the year and establish the CSR implementation plan in the next year, report the effectiveness of implementation and the direction of improvement to the chairman and board of directors at planned intervals, and prepare the CSR report.

# 0.5 Corporate Overview

#### First step in Vietnam in 2001

With over 10 years of experience in related technologies and through co-development of related technologies from time to time with equipment and key parts suppliers, we make continual enhancement of production efficiency and improvement of product quality. We make constant upgrading of existing products and develop products that are lighter, softer, and more air-permeable through product design and new material tests, hoping to bring better product experience to end-users.

#### **Integrated and Total Solutions**

In addition to production, we are committed to promoting full production automation covering packaging, handling, and warehousing to enhance corporate competitiveness. Furthermore, by capturing market demand information, we develop brand-new products and applications through R&D to expand to other areas of the market.

#### **Recognition and Responsibility**

We have received many global awards since 2021. In addition to a company name, Taisun is more a brand that makes us proud. Besides recognizing our business performance and R&D capacity, these awards encourage all employees to move forward.

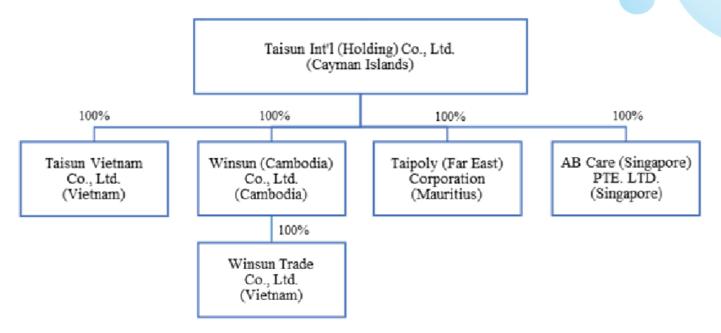

#### **Global View**

With the rise of hygiene awareness across the globe, consumers are glad to accept and use more convenient disposable sanitary products that are mature, everyday life goods with higher market concession and more competitors, with lower differences in process technology and product variety terms. We built plants and set channels in the host countries at the beginning to ensure maximum control of market development trends. In addition, taking account of the product experience of customers, brand image development, and effective product segmentation, besides engaging in continuous product R&D to improve product performance and make customers feel comfortable to use our products, we make active process improvement to enhance customer satisfaction and market competitiveness by raising the yield rate and reducing production cost.

# 0.6 Stakeholder Communication and Materiality Assessment

With respect to four major principles: stakeholder inclusiveness, sustainability context, materiality, and completeness; and through the three main stages: identification, analysis, and validation of the GRI reporting principles, we review sustainable topics and analyze their materiality to adjust our strategic and long-term goals in sustainability management and make the results the reference for writing the CSR report.

#### Stage 1: Identification

**Step 1:** Determining communication targets

Discussion of The CSR Operation Team based on the definition of stake holders. Based on the impact on or from Taisun, seven major stakeholder groups within and outside of the organization or individuals were determined: shareholders, employees, customers, suppliers, community residents, non-gov ernment organizations (NGOs) and government units; and various communication channels were established to receive feedback.

**Step 2:** Gathering of sustainability topics

A total of 12 sustainable issues were consolidated based on the GRI Stan dards, targets of SDGs, organizational development goals, and stakeholder communication.

#### Stage 2: Analysis

Step 3: Investigating the level of concern

Based on the defined stakeholders, apart from discerning the expecta tions of employees through internal communication meetings, we analyzed the level of concern of related topics of suppliers and customers through interaction and questionnaire survey.

Step 4: Analyzing impacts on operations

Taking account of the economic, social, and environmental impacts, we measure the level of impacts of stainable topics in terms of the following five operational aspects: profit, revenue, customer satisfaction, organizational commitment, and risk.

Step 5: Producing the materiality matrix

The materiality matrix was produced based on the analysis results in steps 3 and 4. The topics that concern stakeholders defined in the matrix are included in the annual plan ning and routine business management. Effective ness is assessed periodically, and continual improvement is made.

1. Ethical Management (G); 2. Product Quality (E); 3. Legal Compliance (G); 4. Customer Service (E); 5. Occupational Safety and Health (S); 6. Innovation Management (E); 7. Supply Chain Management (E); 8. Risk Management (G); 9. Energy Management (E); 10. Talent Recruitment and Structure (S); 11. Climate Change (E); 12. Social Engagement (S).

#### **Stage 3: Confirmation**

Step 6: Determining disclosure boundaries

The boundaries of disclosure of sustainability information were de termined in terms of purchasing, production, quality management, and the value chain of customer use to understand the influence of sustainable optics at up- and down-stream.

**Step 7:** Reviewing disclosure contents

20 specific topics in the GRI Standards were addressed based on the 12 material topics identified, and sustainable information was collected and disclosed with respect to the reporting requirements and management approach of each topic.

# Material Issues and Taisun Value Chain

### 1. Ethical Covernance

#### 1.1 Ethical Management

#### 1.1.1 Unit and operation of corporate governance

The board of directors is the Company's top governance body. Seven directors (including 3 individual directors, with one being a female director) are appointed according to the company charter. Under the board, there is the Audit Committee and Remuneration Committee to assist the board in performing its supervi sion duties.

After the full board re-election on June 29, 2020, one independent director was added to the board (now 4 individual directors, with 2 being female directors). On August 5, 2020, the board approved the establishment of the CSR Committee.

The General Financial Department is concurrently the corporate governance unit which is responsible for affairs relating to corporate governance, including providing directors with the data required for business operations; handling affairs relating to holding board meetings and meetings of shareholders by law; implementing the registration and registration change of the Company; and producing the minutes of board meetings and meetings of shareholders.

We have adopted the nomination system for directors and passed the "Regulations for Evaluation of the Board of Directors" in 2016 to evaluate internal board performance every year. The results of board evaluation will serve as the reference for director selection or nomination and the determination of the remuneration for independent directors.

Further education of directors in 2019: To improve board competence, we arrange further education courses for directors every year. In 2019, the total length of directors' further education totaled 24 hours.

D&O liability insurance in 2019: Every year we buy liability insurance for all directors and officers of the Company. In 2019, we bought D&O liability insurance from Shinkong Insurance Co., Ltd. In addition, we reported the validity, amount, and coverage of the D&O to the board on August 10, 2019 with respect to Article 39 of the "Corporate Governance Best Practice Principles for TWSE Listed Companies."

#### B. Maintaining transparency of information disclosure

To disclose information relating to the Company's finance, business operations, and corporate governance by law, such as the "Corporate Governance Be st Practice Principles for TWSE Listed Companies" and the "Corporate Social Responsibility Best Practice Principles for TWSE/GTSM Listed Companies," we have designated responsible staff to gather and disclose related data and implemented the spokesperson

system. After participating in an investor conference, we must disclose related information on the Market Observation Post System (MOPS) to keep stakeholders updated with the status of Taisun.

#### C. Valuing the rights and benefits of stakeholders

We have established the spokesperson system as a channel for disclosing information to the public. We have also designated special staff to handle shareholder commendations and settle shareholder disputes. Stock service staff keep track on and report the stockholding of directors and shareholders holding over 10% of the Company's shares monthly.

We have also established the "Regulations for Preventing Insider Trading" to request insiders to observe related regulations. In addition, we arrange training and awareness education for insiders at least one a year and prohibit them from engaging in operations with undisclosed information to protect the rights and interests of shareholders.

#### 1.1.2 Integrity and ethics and their operation

The President's Office is responsible for promoting ethical manage ment. Members of the office attend the board meeting as guests to un derstand the process of decision making to maintain the Company's ethical management policies. We have established the "Procedures for Ethical Management and Guidelines for Conduct" for the board and manage ment to uphold integrity in carrying out their supervision responsibility, in order to build an environment for sustainable development. In the "Procedures for Ethical Management and Guidelines for Conduct," offering and accepting bribes, providing or accepting undue advantages, offering or promising facilitating fees, engaging in unfair competitions, leaking trade secrets, and prejudicing the rights and interests of stakeholders are prohibited.

We have also stated the punishment and grievance system in related regulations to provide stakeholders with exclusive channels for grievance

and reporting with real-time feedback to ensure the protection of the rights and interests of stakeholders. After detecting unethical behavior, stakeholders can directly report to the competent authorities or audit office. After a report is accepted, both the investigation process and results will be kept confidential. We have also introduced the informant protection program to ensure no retaliation on informants. In 2019, no significant inter-

To enhance governance competence, we hope to increase the female director rate to over 1/3 of the board by 2023.

nal or external offence was reported.

# 1.2 Risk Management

| EPS (NT\$)                           | 8.09                               | 9.41      | 6.50      | 7.61      | 8.79      |  |  |  |

Business has been growing over the last two years following the popularization of diapers because of the constant population and GDP growths in Cambodia, and the appropriate price and quantity control of materials suppliers, maintaining the gross profit margin close to 30%.

# 1.4 Legal Compliance

At Taisun, ethical management is the foundation of legal compliance. Instead of pursuing business profit, all companies within the group are requested to comply with the related laws and regulations of the host countries when running business activities to not break the law.

In terms of the duties and functions of subsidiaries, we keep track on the legal trends in different aspects based on their functions, as shown in the table below:

| Name of Law  | Responsible<br>Unit  | Tracking Mechanism   | Amendment Mechanism  |
|--|--|--|--|
| Health, safety, and environmental<br>(HSE) regulations   | HR Office  | Special staff gather information regarding changes in HSE regulations at any time.   | Timely amendment based on ISO and related legal requirements.                                    |
| Consumer Protection Act, Trade<br>Secrets Act, and Fair Trade Act  | Domestic<br>Department<br>and<br>Import-Export<br>Department | Special staff gather information regarding changes in related regulations at any time through various channels (competent authorities, government websites, and external consultants). | Proposal for amendments to<br>the company charter or<br>Internal regulations where<br>necessary. |
| Banking Act, Regulations<br>Governing Loaning of Funds and<br>Making of Endorsements/Guar-<br>antees by Public Companies, and<br>Anti-Money Laundering Act       | General<br>Financial<br>Department                           | Special staff gather information regarding changes in related regulations at any time through various channels (competent authorities, government websites, and external consultants). | Proposal for amendments to<br>the company charter or<br>internal regulations where<br>necessary. |

# 2. Product Responsibility

#### 2.1 Purchase and Materials Management

We have production bases in Ho Chi Minh City of Vietnam and Phnom Penh of Cambodia. Major materials including the PULP, SAP, and high-grade non-woven fabric are all purchased from leading overseas manufacturers, with a purchasing rate of over 45% in the last two years. In recent years, recognizing the importance of environmental protection and taking account of transportation costs, we have actively deployed and optimized local purchase: enhance the core competence of local suppliers, protect the rights and interests of local base-level workers, and increase local purchase. We have also engaged in energy conservation, carbon reduction, and waste reduction in collaboration with suppliers.

We audit materials suppliers, and evaluations are audited by the evaluation team. We supervise suppliers to make improvements and implement risk management of the supply chain through testing materials and assessing suppliers for legal compliance in terms of our four main aspects (stable quality, reasonable price, punctual delivery, and after-sales service).

To ensure materials quality, we have been tightening our quality requirements on suppliers, hoping that all suppliers of Main materials pass ISO and MSDS certificate by 2021, and 50% of suppliers of Sub materials pass ISO and MSDS certificate by 2023, 70% by 2025, and 100% by 2030.

| Responsible Unit                         | Evaluation Competence and Responsibility   |
|--|--|
| Purchasing Team                          | Selection, assessment, evaluation, and grading of suppliers and consolidation and filing of evaluation data.             |
| R&D Department                           | Confirmation of new element specifications, trial making of samples, and   |
| QA Department                            | participation in supplier evaluation as necessary. IQC inspection and confirmation of suppliers and supplier evaluation. |
| General Manu-<br>facturing<br>Department | Assessment of Supplier productivity, environmental and Supplier evaluation.  |

Up to 94% of suppliers have been evaluated in the last two years.

In 2019, a total of 44 suppliers were evaluated. We have also sent the recommended corrections for defects found in the evaluation for suppliers to reply. After opinion exchange, both parties reviewed the overall evaluation results and recommendations for a second time.

To innovate management, we will evaluate all suppliers in 2020.

#### 2.2 Supply Chain Management

We are committed to increasing local purchases. Through comprehensive experience in collaboration, we enhance the contingency capacity of suppliers and make continual improvement of processes and quality. Except for the PULP and SAP, the local purchase rate of materials in 2019 was about 37%.

The following management activities were implemented in 2019:

- A. Set the local purchase target and constantly promoted or maintained the local purchase proportion.
- B. Actively improved the technology and quality of materials suppliers to increase local purchases.

We engage in active collaboration and technology exchange with local suppliers to increase local purchase of materials (except for the PULP and SAP) to 80% by 2030.

# 3. Innovation and RSD

Insisting on innovation and R&D and recognizing continual resources investment and efforts are the only ways to achieve sustainable development; we invested NT\$15,418,000 in R&D in 2019.

Inspection of trial products to ensure product quality complies with the planning requirements.

In the pursuit of materials innovation, we engage in continual technology R&D to ensure the use of green materials at 30% by 2030, 60% by 2040, and 100% by 2050.

#### 3.2 Product Quality

**QA** Department

We implement and effectively implement and maintain the ISO 9001 quality management system, integrate mutual communication, enforce system management and implementation, pursue continual improvement and problem prevention, and confirm system adequacy and effectiveness. We are committed to:

- A. Establishing, implementing, maintaining, and updating a well-planned quality safety management system;
- B. Realizing the producer's role in a sustainable supply chain;
- C. Complying with legal requirements;
- D. Complying with the safety requirements agreed upon with customers; and
- E. Effectively communicating, implementing, and maintaining the system at all levels.

We build a reliable and trusted quality system for the capture of customer requirements, product design, process design, trial production in small quantity, implementation of mass production, and after-sales service. A strict quality management system has been established for each stage. We plan to pass ISO 9001 and GMP certificate by 2020 and ISO 14001 certificate by 2025 for Group. We make continual process improvements to enhance the yield rate to reduce the product loss rate to 5% by 2023.

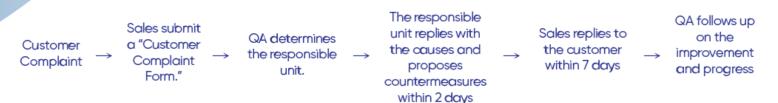

#### 3.3 Customer Service

To provide customers with better services, we conduct two customer satisfaction surveys every year to provide a reference for defect improvement, market demand survey, and the risk management of the macro environment and competitive strength. Based on the survey results, we understand customer satisfaction and take improvement actions to improve the quality of products and services. In 2019, customer satisfaction rose to over 80%. However, in the highly competitive consumer market, we aim to raise customer satisfaction to over 90% by 2023.

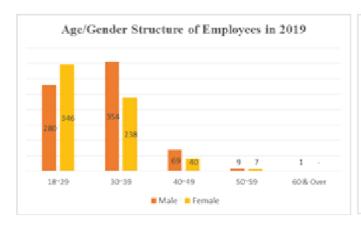

#### **Customer Complaint Handling Process**

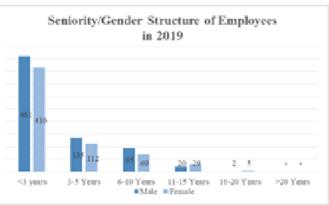

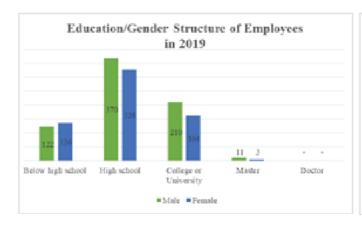

# 4. Happy Workplace

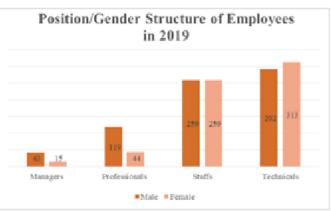

#### 4.1 Talent Recruitment and Structure

As sales have been growing in recent years, we recruit talents for the need of future organizational development. We hire employees with respect to local labor laws and regulations and do not force labor services against the employee's will. We recruit talents through job banks or internal recommendations in a fair and open manner regardless of gender, religion, ethnicity, nationality, and political affiliation, remuneration and benefits are equal for all employees. The workforce structure in 2019 is as follows:

#### Our workforce goals:

- A. Progressively maintain the average age below 35 years every year from 2020–2030.
- B. Female officer rate in management over 35% by 2025 and 40% by 2030.
- C. Job rotation rate over 5% and internal promotion rate over 20% by 2025.

#### **4.2 Talent Development**

To optimize the career development of employees, we arrange different types of training for active employees, including new employee training, technical training, and Manager's management skill training. Besides sharpening the skills and competence of employees to achieve the Company's common goals and for them to achieve self-actualization, we also use their training results as a reference for the performance evaluation and promotion planning. In 2019, we arranged up to 3,368 hours of training and education for 1,501 times.

In the future, we will adopt the dual-track development system. In addition to a complete development framework, we also provide employees with better development based on their traits and expertise by strengthening training on management competence and expertise for employees to become more professional.

To implement employee training and education more efficiently, we have initiated the construction of the online training and education system, with a target to complete online training and education at 50% by 2021 and 100% by 2023 for online training and education, technical training, and Manager's management skill training.

#### 4.3 Employee Salary and Benefits

To achieve the double goal of talent retention and reward, we have designed a competitive remuneration system that is better than the Competitors to improve the Company's overall performance. Besides contributing employee pensions according to local government requirements, we also provide comprehensive benefits, including birth allowance, medical allowance, wedding/funeral allowance, group insurance, health check, birthday cash gift, tour allowance, festival or year-end activities, milk or in-kind allowance for OT work, and other activity support. In 2019, the overall benefit expense was about NT\$17,016,000.

We engage in group bargaining with the labor union to maintain a sound labor-management relationship. Apart from being rated as the best labor union by

the local government in 2019, the labor union of our Vietnam HQ will continue to work for the best interests of employees to turn Taisun into a company that makes employees proud.

#### Advanced typical example of Trade Union for 5 years (2015–2019)

**Outstanding Labor Union 2019** 

Outstanding Trade Union in learning and following Ho Chi Minh's thought, morals and style from 2019-2020.

In addition to the efforts of the management, the sales growth in recent years should also be attributed to the concerted efforts of employees. Therefore, when planning remuneration and benefits for employees, the average Salary adjustment of all companies of the Group shall be higher than the average salary adjustment rate announced by local governments. To make a step forward, we will established the employee satisfaction survey system in 2020 to raise employee satisfaction to over 75% by 2023, 80% by 2025, and 90% by 2030.

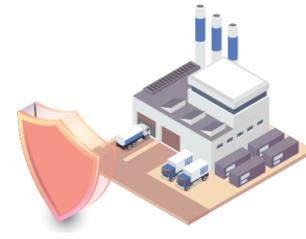

#### 4.4 Occupational Safety and Health

To build a safe work environment and healthy - friendly workplace for employees, we have established an implementation plan with respect to ISO 9001.

| Legal Compliance          | Comply with or do better than the OH&S requirements to achieve zero occupational accidents.  |
|---------------------------|--|
| System Establish-<br>ment | Integrate the optimization and simplification of the HSE management system.  |
| Risk Management           | Review hazard identification, risk assessment, and risk control every year to discover potential risk and establish control targets. |
| Employee Cultiva-<br>tion | Arrange OH&S training and education for fundamental management to prevent accidents from occurrence.                                 |
| Total Participation       | Provide OH&S training, education, and publicity, and encourage participation in OH&S activities.                                     |
| System Audit              | Encourage total participation through improvement proposals to deepen the 5S and ESH management culture.                             |

A total of 10 occupational accidents without casualty were reported in 2019. Although the number of work-related accidents remained the same in the last two years, we have spared no efforts in making continual improvement. In the most recent year, no occupational disease was confirmed.

Committed to building a safe and healthy work environment, we set "zero accidents" as the unique ESH goal.

# 5. Social Engagement

#### **5.1 Social Engagement**

To repay society, apart from providing financial support and donations for the vulnerable in society, we properly link to our major product lineups and organize and participate in charitable activities for employees to care for and engage in social welfare. In 2019, we engaged in the following social welfare activities:

| Local<br>Engagement                | Recipient                                 | Type of Assistance                          | Amount          | Frequency     | Social Influence   |
|------------------------------------|---|---|-----------------|---------------|--|
| Industry-academia<br>collaboration | College and university students           | Internship                                  | VND 22,292,820  | 4 people      | Enhance connection with local industrial talents.        |
| Neighborly<br>activity             | Local communities<br>of the Vietnam plant | In-kind or financial<br>donations for local | VND 892 million | 71 activities | Growing together with local communities.                 |
|                                    | Local communities of Cambodia plant       | schools and facilities                      | USD 9,543.88    | 13 activities |  |
| Vulnerable Care                    | College and university students           | Scholarship                                 | NTD1million     | 20 people     | Provide learning<br>opportunities for local<br>students. |

Visit to an orphanage in Cambodia.

# Charity donation to vulnerable groups in Cambodia.

#### **5.2 Future Prospects**

We spare no effort in engaging in local social charity. Therefore, we often participate in social welfare activities with employees, hoping to equip every employee with empathy and sympathy and to build a warm society.

Our future goals include: Investing in ecology conservation, environmental protection, education, and charity every year at 1% of net Profit before tax during 2021–2025 and 1.5% during 2026–2030.

## 6. Green Environment

#### 6.1 Environmental and Energy Management Policy

Instead of wastewater and waste from production, most wastewater and waste from our plants is domestic sewage and waste. In effluent discharge management, we periodically check effluent quality and follow the management instructions of the industry park to ensure the effluent quality complies with government requirements. We also plan a stage-based water conservation design for new equipment or domestic water consumption to reduce water consumption and effluent discharge.

Besides implementing waste sorting, collection, storage, management, and disposal, we sign contracts with government-accredited qualified waste disposal contractors to dispose of waste. ESH staff also conduct onsite inspection of contractors as necessary to ensure waste is disposed of and treated in conformity with the related regulations. In terms of hazardous waste, a management system has been established to control a small amount of fuel and lubricating oils scraped from company cars or forklifts. These oils are also disposed of by qualified contractors.

In addition, we encourage resource recycling and reuse. Besides recovering cartons and packaging materials from incoming materials for reuse, we also encourage office automation, double-side printing of paper, paper recycling, manila envelope reuse, and the use of photocopier with scanning functions to reduce paper consumption for printing.

No violation of environmental protection regulations was reported in 2019.

We hope that all suppliers can sign the CSR undertaking in 2020.

#### 6.2 Climate Change and Energy Management

Climate change is as an important topic affecting operations in sustainable development of Taisun. We also state our obligations for environmental protection in our ESH policy. In 2019, we planned and implemented the following environmental protection measures according to the PCDA cycle:

- A. Energy conservation: Implemented office energy conservation and carbon emissions, enhanced the employees' environmental protection awareness, and progressively replaced lights with LED lamps to reduce energy consumption.
- B. Green energy use: We have planned the installation of a PV system at the Vietnam plant with a capacity of 88,695kWh/year, equivalent to 0.75% of the plant's energy consumption, to reduce a total of CO2 emissions of about 22,706 CO2e/year.
- C. Green purchase: Besides increasing local purchase, we maintained and replaced equipment with lower energy efficiency, and planned to pur chase products carrying the Green Mark, Energy Label, and Water Conservation Mark.

At Taisun, we consume mostly electricity and a small quantity of diesel and gasoline. The electricity consumption in 2019 was 11,851,872kWh, with energy intensity calculated based on the production output by responsible staff. As the 2019 energy intensity reduced from 2018, it suggests that energy efficiency was enhanced.

| ltem                     | Unit    | 2018      | 2019      |
|--------------------------|---------|-----------|-----------|
| Total Energy Consumption | GJ      | 38,381.32 | 42,666.74 |
| Production Output        | KPCS    | 528,815   | 617,022   |
| Energy Intensity         | GJ/KPCS | 0.0726    | 0.0692    |

In conclusion, our energy management goal against climate change is: Yearly reduce 3% of Energy Intensity in comparison with the previous year by 2030 to reduce electricity consumption and CO2 emissions.
